

CTRL: LOCUST

Executive Experience Map

The two-release website architecture, public AIRA journey, discovered CTRL reveal and restricted Vault at a glance.

PREPARED FOR	Alfonso Morales
DATE	September 1, 2026
VERSION	Client review / September 1, 2026
AUTHORITY	Draft 4.3 + Alfonso's current decisions

REVIEW STATUS
Planning document only. This is not implementation, publication, deployment or partner-contact authorization.

Executive Experience Map

This is the fast orientation layer for the complete website program. It shows the initial campaign release, the later public AIRA institution, the discovered failure that reveals CTRL, and the restricted Vault areas that continue the story. Detailed page behavior, shared systems and production requirements live in the Master Website Experience Specification.

Experience relationship: Initial campaign landing site -> public AIRA site -> discovered CRT reveal -> restricted CTRL Vault.

SITEMAP 1 - INITIAL CAMPAIGN LANDING SITE

- / - Campaign landing page
 - AI issue and evidence montage
 - Classified-file buildup
 - Static and CRT shutdown
 - "Who Controls AI Agents?"
 - #WhoControlsAI
 - Email signup
 - Signup confirmation state
- /privacy
- /terms

The campaign experience remains one primary page. Its different moments are sequential states, not separate pages.

SITEMAP 2 - PUBLIC AIRA SITE

- / - AIRA Home / Current Advisory
- /why-we-exist - Why We Exist
- /advisories - Current Advisories
 - /advisories/[advisory-name] - Advisory detail
- /evidence - Evidence Library
- /research-guidance - Research & Guidance
 - /research-guidance/[guide-name] - Guide or research detail
- /public-records - Public Records
 - /public-records/[record-name] - Record detail
- /about - About AIRA
 - /about/accountability
 - /contact-press
 - /careers

DISCOVERED AIRA-TO-CTRL TRANSITION

This is an experience state, not a page in AIRA's public navigation.

1. Visitor explores an AIRA page.
2. Hidden glitch becomes eligible.
3. AI presence requests help.
4. Visitor completes the interaction.
5. AIRA interface fails.
6. Camera pulls backward through the CRT glass.
7. CTRL Vault is revealed.
8. Browser moves into the restricted [/vault](#) experience.

CTRL is never linked in AIRA's ordinary public navigation.

SITEMAP 3 - RESTRICTED CTRL VAULT

- [/vault](#) - Channel 18 desk and main room
 - AIRA CRT
 - Room navigation arrows
 - Return point for every Vault station
- [/vault/locust-case](#) - Locust Case and Tape Station
 - Locust interaction 1 - to be defined
 - Locust interaction 2 - to be defined
 - Locust interaction 3 - to be defined
 - Optional Locust interaction 4 - to be defined
 - Reseal and return
- [/vault/screening-archive](#) - Analog Screening Archive
 - [/vault/screening-archive/teaser](#)
 - [/vault/screening-archive/prologue](#)
 - [/vault/screening-archive/short-film](#)
 - Sealed future release bays
- [/vault/additional-experience](#) - Screenplay-derived experience to be selected
- [/vault/settings](#) - Audio, captions, motion and accessibility
- [/vault/restart](#) - Restart the complete experience
- [/vault/exit](#) - Return to the public AIRA site

AIRA Inside the Vault

The desk CRT loads the real AIRA page being viewed, including routes such as:

- [/why-we-exist](#)
- [/evidence](#)
- [/public-records/\[record-name\]](#)

Backing away from the CRT returns the visitor to [/vault](#). The AIRA page retains its state so sitting back down returns the visitor to the same page. AIRA pages are not duplicated under [/vault](#); the CRT displays the same public routes inside the room experience.

SIMPLE SITE RELATIONSHIP

Initial campaign landing site -> public AIRA site -> discovered CRT reveal -> restricted CTRL Vault
